

# FullAuction - Quick Start Guide

## Image Uploading

### Taking Photos

Photos should be taken and ready and it's highly recommended to add **well composed photos** before launching a car on the site.

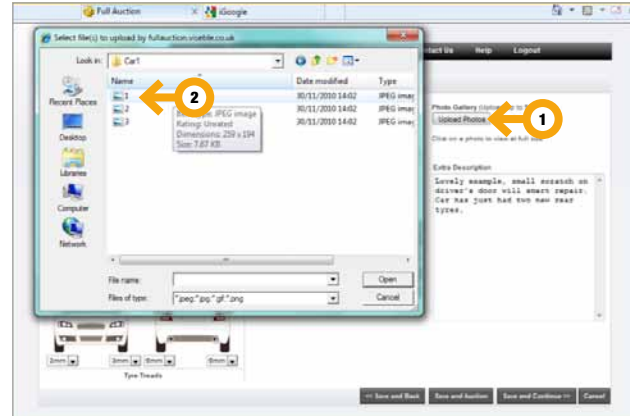

#### Tip!

Take the photos in the order you would like them to appear on **FullAuction**. For example, it's best to take the front  $\frac{3}{4}$  shot first. This will then become the main image.

If not, store the images in a folder with the vehicle's Reg number and *Sort* them by *date* or *name*.

Photos are a key part of the sales process. It is recommended good quality photos are added prior to launching a car.

Try to use a setting of **640 x 480 pixels** on your camera. Higher resolution images can be used depending on your individual internet speed for uploading time (max size of 3MB).

### Uploading Photos

1. Click **Upload Photos**. A window will open.
2. Browse and select photos from a file. Up to **fifteen** images can be uploaded. Another useful feature of **FullAuction** is that by highlighting **all** images, they upload at once with just one click.

### Examples

There are some good examples of photos...

...and some not so good.

...we'll let you decide.
